UTALIC

## The fast and efficient way to build software

# Introduction to utalic & Low-Code Development

Low-code software development is a method of building custom software applications that relies on visual interfaces and drag-and-drop functionality, rather than manual coding. This approach to software development is designed to reduce the time and effort required to create custom software applications, making it an ideal solution for businesses and individuals who want to create custom software applications quickly and efficiently.

Low-code software development has revolutionized the way software projects are approached and executed. With low-code platforms like utalic, businesses and individuals can rapidly create and deploy custom software applications without the need for extensive coding knowledge or expertise. utalic is designed to streamline the software development process, making it faster and more efficient than traditional coding methods.

Benefits of utalic

utalic offers a range of benefits that make it the perfect choice for businesses and individuals looking to create custom software applications. Some of the key benefits of utalic include:

Increased Productivity

utalic makes it easy to build custom software applications, allowing users to focus on their core business tasks and improving their overall productivity. With its visual interface, users can quickly free up time and resources for other important tasks.

Faster Development

utalic provides a visual interface that makes it easy to build and design custom software applications. With its drag-and-drop functionality, users can quickly and easily add components to their app, reducing the time it takes to complete a project.

Reduced Manual Work

utalic eliminates the need for manual coding, reducing the amount of manual work required to create custom software applications. With its visual interface and drag-and-drop functionality, users can quickly and easily add components to their app.

The power of utalic

There are many more benefits of utalic, not only to the team that is working on your projects right now.

Citizen Developers

No Technical Skills Required: utalic enables non-technical users, known as "citizen developers", to create software, meaning that end-users can develop apps specifically for their area of expertise.

Improved User Experience

utalic provides a range of features and components that make it easy to create custom software applications that provide a great user experience. With its visual interface and intuitive design, users can quickly and easily build custom software applications that are designed for ease of use and user-friendly navigation.

Rapid Prototyping

utalic allows end-users to create prototypes quickly and efficiently, allowing them to test concepts and ideas without investing a significant amount of time or resources.
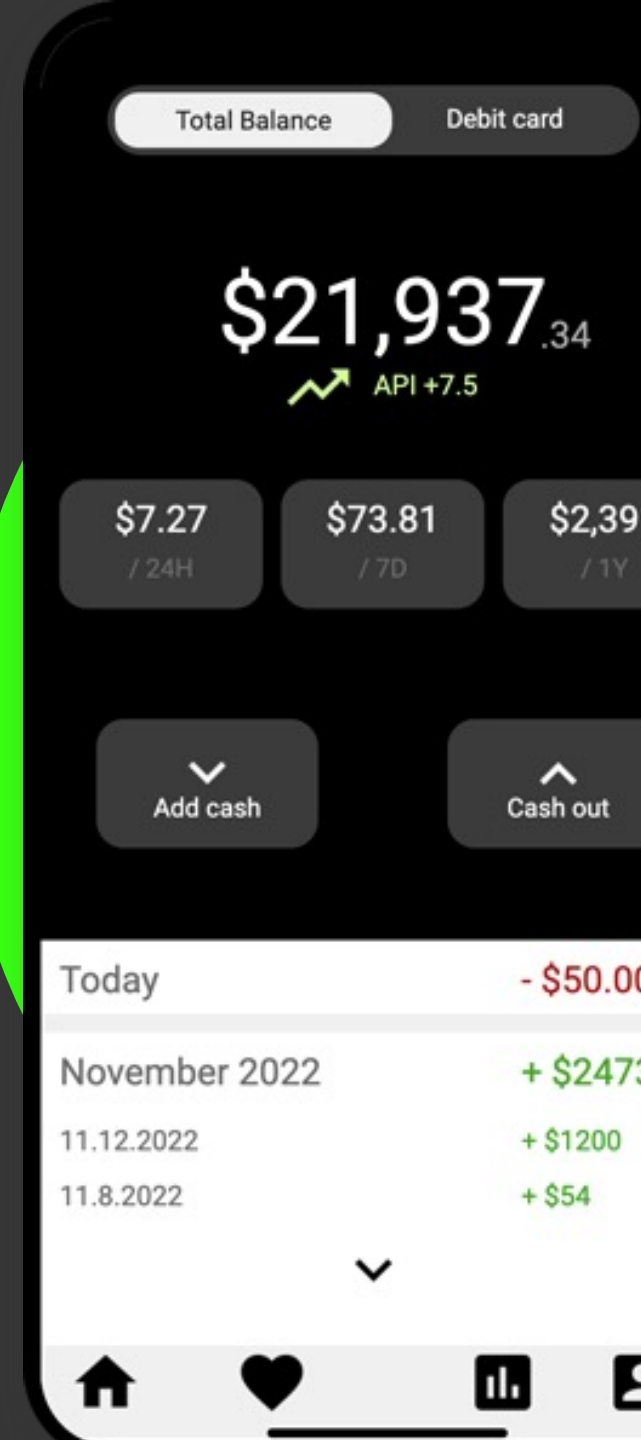

Internal apps

utalic is a versatile platform that can be used to create internal apps. For internal apps, utalic can be used to streamline processes, automate workflows, and improve communication and collaboration within the organization.

Prototype Creation

Prototyping is an essential part of the app development process and can greatly impact the success of your final product. utalic provides a powerful solution for creating prototypes that is both fast and flexible. With utalic, you can quickly create a working prototype of your app, allowing you to test and validate your concepts before investing significant time and resources into development.

utalic's visual app designer makes it easy to create a visual representation of your app, without any coding required. With its drag-and-drop interface, you can quickly add new elements to your prototype and see the results in real-time. utalic includes numerous modern user interface elements, so you can create a powerful and visually appealing prototype that accurately represents your final product.

One of the key benefits of using utalic for prototyping is the ability to get results quickly. With its visual app designer, you can create a working prototype in a matter of hours or days, rather than weeks or months. This allows you to test your concepts and gather feedback from potential users in a short amount of time, helping you to refine and improve your app before investing in further development.

In addition to its visual app designer, utalic also provides a workflow editor that allows you to create complex workflows and logic without writing a single line of code. With the workflow editor, you can easily add functionality to your prototype and see the results in real-time, allowing you to test and validate your app's logic and functionality.

Overall, utalic is a powerful solution for prototyping that provides fast and flexible results. With its visual app designer and workflow editor, you can quickly create a working prototype of your app and validate your concepts before investing significant time and resources into development. Whether you're developing an internal app for your business or a consumer-facing app, utalic provides the tools you need to create a successful and impactful product.

Research Results about Low-Code

Recent research has shown that low-code software development is growing in popularity, with an increasing number of businesses and individuals choosing this method of building custom software applications. According to a recent survey, low-code platforms are expected to be used by 65% of all development teams by 2024, up from just 10% in 2019. This trend is driven by the benefits of low-code software development, including faster development, faster deployment, increased productivity, reduced manual work, and improved user experience.

Gartner study:

65%

of companies to use Low-Code by 2024

Forrester study:
Low-Code market reached

$21.2 billion

by 2022

CAGR of Low-Code expected to be more than
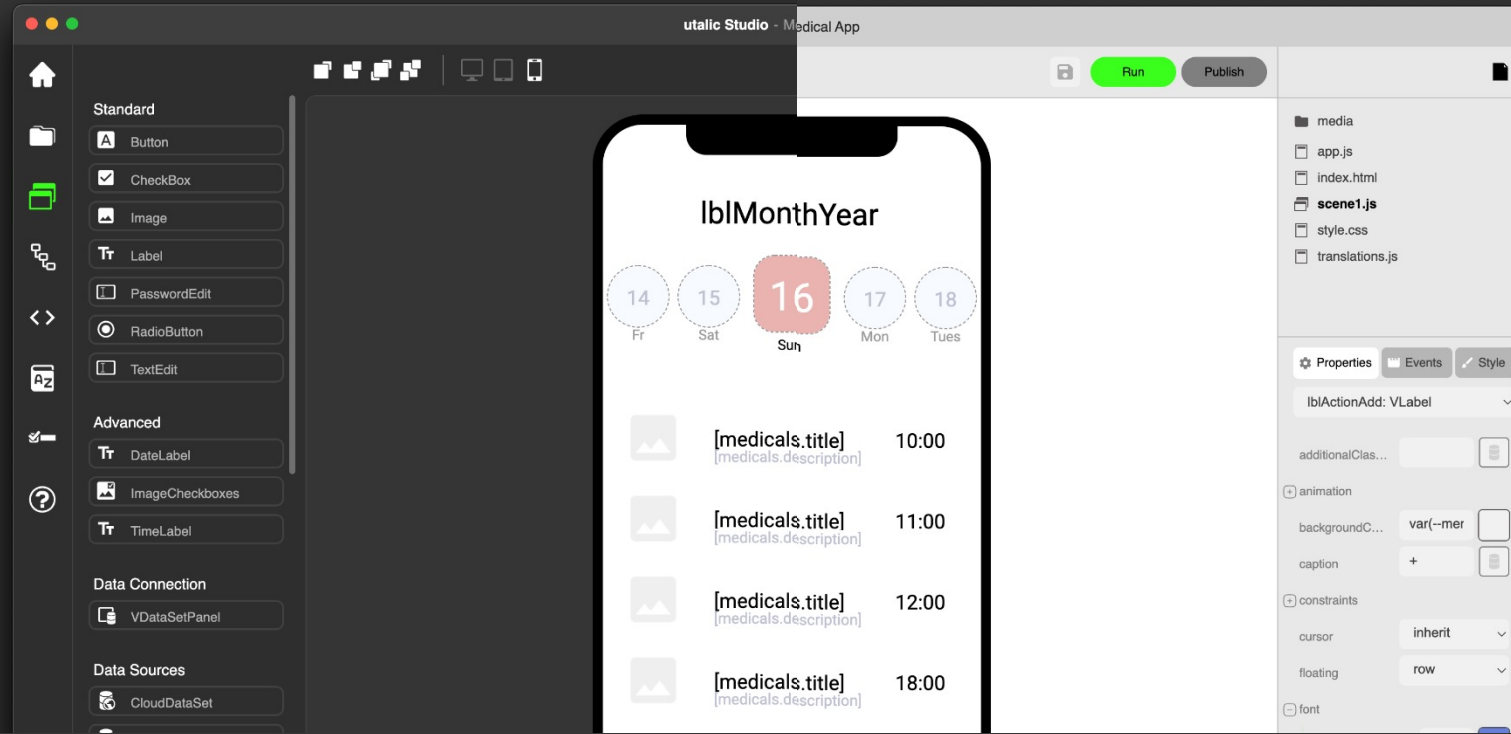

30%

Conclusion

Low-code software development and utalic provide a powerful solution for organizations looking to streamline their development processes, bring new applications to market faster, and improve the overall quality of their code.

utalic offers a wide range of benefits, including the ability to create prototypes quickly, the ability to create modern and user-friendly user interfaces, and the ability to create both internal and external apps.

With its intuitive visual app designer, visual workflow editor, and powerful documentation tools, utalic is the perfect solution for organizations looking to take their development processes to the next level.
